Sequence 1, Application US/09261416A

Patent No. 6291663

GENERAL INFORMATION:
APPLICANT: 0'Exiten, Timothy J.
TITLE OF INVENTION: TADG-12: A No. 6291663el Transmembrane Serine Protease
TITLE OF INVENTION: Overexpressed in Ovarian Carcinoma
FILER REPERENCE: D6192
CURRENT APPLICATION NUMBER: US/09/261,416A
CURRENT FILING DATE: 1999-03-03
NUMBER OF SEQ ID NOS: 14
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1874 TCTATGCTGCACGTAGACCGTTTTGTAACATTTTAATCTGTTAATGAATAATCGGTTTGG 1933
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             2316 TCTTTGTAGCATTTGGTGCTTGACGTATTATTGTCCTTTGATTCCAAATAATATGTTCC 2375
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1874 TCTATGCTGCACGTAGACCGTTTTGTAACATTTTAATCTGTTAATGAATAATCCGTTTGG 1933
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            2444 ICTTTGTAGCATTTGGTGCTTGACGTATTATTGTCCTTTGATTCCAAATAATATGTTCC 2503
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Sequence 3, Application US/09518046
| Patent No. 6294663
| GENERAL INFORMATION:
| APPLICANT: O'Brien, Timothy J.
| APPLICANT: Underwood, Lowell J.
| TITLE OF INVENTION: Transmembrane Serine Protease Overexpressed
| TITLE OF INVENTION: In Ovarian Carcinoma and Uses Thereof
| FILE REFRENCE: D6192CIP
| CURRENT APPLICATION NUMBER: US/09/518,046
| CURRENT PILING DATE: 2000-03-02
| EARLIER APPLICATION NUMBER: 09/261,416
| FARLIER FILING DATE: 1999-03-03
| SEQ ID NO 3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           0;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ; OTHER INFORMATION: entire cDNA sequence of TADG-12 variant gene

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Mouse Evi27 gene was mapped to chromosome 14. Evi27 is a common site of retroviral integration (in BXH2 murine myeloid leukaemias. Evi27 cDNA sequences are useful as antisense molecules to inhibit Evi27 protein or for chromosomal mapping or mutational analysis of Evi27 protein. They are proviral cintegration sites associated with leukaemias and monitoring this site provides a genetic tag for disease gene identification. The proteins of the invention are useful to stimulate the secretion of proinflammatory cytokines such as IL-8 and plays an important role in the developmental and/or disease processes of haematopoietic cin the developmental and/or disease processes of haematopoietic colls. Hence modulating the expression of Evi27 at the RNA or protein level is used in the treatment of diseases such as cancer or autoimmune diseases.

They are proviral integration sites associated with leukaemias and monitoring this site provides a genetic tag for disease gene identification. The proteins of the invention are useful to stimulate the secretion of proinflammatory cytokines such as II-8 and plays an important role in the developmental and/or disease processes of haematopoietic cells. Hence modulating the expression of Evi27 at the RNA or protein level is used in the treatment of diseases such as cancer or autoimmune diseases.

                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                   S
                                                                                                                                                                                                                                                                                                                                       The present sequence is human protein with hydrophobic domain encoding CC cDNA clone HP10758. The polynucleotide and polypeptide of the invention CC may be used in the prevention, diagnosis and treatment of diseases CC associated with inappropriate polypeptide expression. The polynucleotides CC into a host cell and culturing the cell to express the protein. The CC polynucleotides and its complementary sequences may also be used as DNA probes in diagnostic assays and also used in gene therapy. The CC polypeptides may also be used as antigens in the production of antibodies and in assays to identify modulators of polypeptide expression and CC supplements, to modulate orytokine and cell proliferation activity, to modulate immune stimulation or suppression (e.g. for the treatment of CC microbial infections and autoimmune disorders such as multiple sclerosis, remanatoid arthritis and insulin-dependent diabetes), to modulate change it is disease and Alzheimer's CC treatment of Parkinson's disease, Huntington's disease and Alzheimer's CC disease), to modulate activin and inhibin activity, to modulate receptor cCC modulate haemostatic and thrombolytic activity, to modulate receptor ligand activity, to modulate inflammation and to inhibit tumour growth.

II-17 pNA can be used to modulate the levels of II-17 protein in an animal. The II-17 protein is useful for treating, preventing or ameliorating a disease, such as immune system dysfunction (rheumatoid arthritis, osteoarthritis, inflammatory joint disease); autoimmune (multiple sclerosis, lupus, diabetes, inflammatory bowel disease, transplant rejection, graft vs. host disease); inflections (HIV, (hepatitis, bacterial); weight disorders (obesity, amorexia, cachexia, sepsis); neuronal dysfunction (Alzheimer's, Parkinson's disease); lung accurate respiratory distracts (multiple screen value).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 1841 BP; 522 A; 455
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (acute respiratory distress syndrome, cystic fibrosis, emphysema); skin (psoriasis, eczema, wound healing); kidney (glomerulonephritis); bone (osteoporosis, Paget's disease, hypercalcaemia) vascular system (epilepsy atherosclerosis, heart failure, angiogenesis); tumours, cancers (lymphoma leukaemia); reproductive (infertility, miscarriage, endometriosis), eye (blindness, retinal neuropal and treatment of diseases involving inflammation. The present sequence is human Interleukin-17 receptor B-2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Disclosure;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to novel human nucleic acids encoding interleukin 17 (IL-17) receptor like proteins. The present sequence is one such coding sequence. The IL-17 receptor-like proteins and coding sequences are useful for treating a pathological condition related to immune system dysfunction (e.g. psoriatic arthritis), infections (e.g. viral infections), weight disorders (e.g. obesity), neuronal dysfunction disorders (e.g. Alzheimer's disease), lung disorders (e.g. asthma), skin disorders (e.g. cozema), kidney disorders (e.g. glomerulonephritis), bone disease (e.g. osteoporosis), vascular system disorders (e.g. ischammia), eye disorders, reproductive disorders, tumours and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; II-17 receptor-like protein; immunomodulatory; antiarthritic; antipsoriatic; antimicrobial; anoretic; nootropic; neuroprotective; antiasthmatic; antiallergic; dermatological; cytostatic; gene therapy; interleukin 17; immune system disorder; infection; weight; reproductive; neuronal dysfunction; lung; asthma; skin; eczema; kidney; inflammation; glomerulonephritis; bone; osteoporosis; vascular system; ischaemia; eye;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
           The invention relates to primate and rodent DNAX cytokine receptor subunit (DCRS) polypeptides and the polynucleotides encoding them. The receptors, or their portions may be useful as phosphate labelling enzymes to label general or specific substrates. The subunits may also be functional immunogens to elicit recognising antibodies, or antigens capable of binding antibodies. A combination, e.g., including a DCRS can be used as an immunogen for the production of antisera or antibodies capable of distinguishing between other cytokine receptor family members. A purified DCRS can also be used as a reagent to detect antibodies generated in response to the presence of elevated levels of expression, or immunological disorders which lead to antibody production to the
                                                                                                                                                                                                                                                                                                                                                                                                              Isolated antigenic human or mouse DNAX receptor subunit-like polypeptide useful for detecting antibodies generated in respective of increased protein levels or immunological disord
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI; 2002-106198/14.

                                                                                                            The present invention provides the protein and coding sequences of novel proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a cDNA

The present sequence is a cDNA encoding human interleukin (II)-17 (CC receptor related protein (Bvi27). Human Evi27 genee was mapped to chromosome 3p21. Evi27 is a common site of retroviral integration CC in BXH2 murine myeloid leukaemias. Evi27 cDNA sequences are useful as antisense molecules to inhibit Evi27 protein or for chromosomal companion or mutational analysis of Evi27 protein. They are proviral integration sites associated with leukaemias and monitoring this site provides a genetic tag for disease gene identification. The proinflammatory cytokines such as IL-8 and plays an important role in the developmental and/or disease processes of haematopoietic cells. Hence modulating the expression of Evi27 at the RNA or protein level is used in the treatment of diseases such as cancer cor autoimmune diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

```

The present sequence encodes a human interleukin 17-receptor-like pr (ILITRLP) variant. The ILITRLP polypeptide is useful for screening f agonists and antagonists. These antagonists and agonists are useful treating, diagnosing, detecting and or preventing disorders related cellular activation, haemostasis, angiogenesis, tumour metastasis, cellular migration, ovulation or neurogenesis, such as osteoporosis, arthritis and autoimmune disorders e.g. systemic lupus erythromatosu

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The patent relates to novel interleukin-17-like receptor

C protein (II-17RLP). II-17RLP is a homologue of the II-17 receptor and has

C a wide range of cytokine receptor-like activities. II-17RLP or its

C asyonists may be used to enhance host defenses against resistant chronic

C and activation of microbicidal leukocytes. I may also be used to

C increase T-cell proliferation by stimulating II-2 biosynthesis, for the

C treatment of T-cell mediated autoimmune diseases and lymphocytic

C leukaemias. II-17RLP may also be used to regulate hematopoiesis and to

C treat sepsis. Extracellular II-17RLP domains may be used as antagonists

C of II-17RLP. II-17RLP agonists and antagonists can also be used to

C modulate II-6 expression, useful in treatment of cancers such as

C myelomas, plasmacytomas and hymridomas and Lennert's Lymphoma. The

C myelomas, plasmacytomas and hymridomas and Lennert's Lymphoma. The

C myelomas, plasmacytomas and hymridomas and Lennert's Lymphoma. The

C myelomas squence encodes human II-17RLP. This cDNA sequence was

C derived from sequencing the HAPOR40 cDNA clone (ATCC deposit

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequences AAS45925-AAS46231 represent DNA molecules encoding and PCR primers for PRO polypeptides of the invention. The sequences of the chivention can be used to detect the presence of a tumour in a mammal by comparing the level of expression of a PRO polypeptide in a test sample of comparing the level of expression in the test sample indicates the presence of a chigher level of expression in the test sample of normal cells, whereby a higher level of expression in the test sample indicates the presence of a cumour in the mammal. Mammals include dogs, cats, cattle, horses, sheep, pigs, goats and rabbits but are preferably human. The polypeptides can be used to stimulate tumour necrosis factor (TNF) alpha release from human could be protected with it. A specific polypeptide can be used to stimulate the proliferation or differentiation of chondrocyte cells. The PRO proteins can be used to determine the presence of tumours and also susceptibility to tumour development, particularly adrenal, lung, colon, colon, proteins, prostate, rectal, cervical, or liver tumours, in mammalian subjects. The oligonucleotide probes specific for the PRO nucleic acids can be used for genetic analysis of individuals with genetic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches 1194;

Novel PRO polypeptides homologous diagnosis and treatment of immune arthritis and diabetes to interleukin-17, useful for the related disease e.g. rheumatoid

Claim 1; Fig 11; 188pp; English

systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis, a spondyloarthropathy, systemic sclerosis, idiopathic inflammatory myopathy, Sjogren's syndrome, systemic sclerosis, idiopathic inflammatory myopathy, Sjogren's syndrome, systemic vasculitis, sarcoidosis, autoimmune haemolytic anaemia, autoimmune thrombocytopaenia, thyroiditis, diabetes mellitus, immune-mediated rena disease, a demyelinating disease, an autoimmune or immune-mediated skin disease, contact dermatitis, an allergic disease e.g. food hypersensitivity, asthma, a transplantation associated disease, or a chronic inflammatory demyelinating polyneuropathy. Treating a degenerative cartilaginous disorder comprises administering a PRO1031 or PRO1122 polypeptide agonist, or antagonist to the mammal. Numerous examples of the diseases and disorders are given in the specification. The sequence (DNA 115291-2681) encodes a PRO polypeptide (PRO5801) which is the human Interleukin 17 receptor, IL-17KH1. A composition containing ant/agoniets to the PRO polypeptides or individual components are useful for treating a mammal with an immune related disease, e.g. renal S, an

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is the coding sequence for a human PRO polypeptide secreted and transmembrane). The PRO protein, and PRO agonists, PRO antagonists or anti-PRO antibodies are useful for preparation of a medicament useful in the treatment of a condition which is responsive to the PRO protein, agonists, antagonists or anti-PRO antibodies. The PRO protein may also be employed as molecular weight markers for protein electrophoresis. The PRO coding sequence has applications in molecular biology, including use as hybridisation probes, and in chromosome and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 2;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Eighty four nucleic acids encoding PRO polypeptides, useful in molecular biology, including use as hybridization probes, and chromosome and gene mapping. -
